

Learn a skill. Build a **career**. Work from **anywhere**.

33+ live, practical courses that take you from where you are now to a certificate, a real internship, and a genuine shot at remote work. No background in the field required, just the willingness to show up and learn.

A remote skills academy built for real outcomes.

We work with people who have ambition but not yet the specific, provable skill that gets them hired remotely, and close that gap through live training, not another library of videos to watch alone. You don't need any background in the field to start.

1,400+

Graduates across our course catalog

405+

Placed in remote roles after graduating

"You don't need a degree in the field. You need a specific skill, proof of it, and one real chance to apply it."

A launchpad for your next remote role

Every course runs as live, instructor-led classes, not pre-recorded videos. You practice inside the same tools the work actually uses, then complete a genuine internship before you graduate, so your first application has real experience behind it, not just a certificate.

FORMAT

**Live,
online**

EXPERIENCE

**None
required**

INCLUDES

**Certificate +
internship**

TRACKS

**33+
courses**

Real internship

A genuine 2-month internship after the taught weeks, applying your new skill to real, applied work.

Job support after

Job assistance, interview coaching, and VAA Global Talent job matching continue after graduation.

Portfolio building

You graduate with demonstrable work to show a client or employer, not just a claim on a CV.

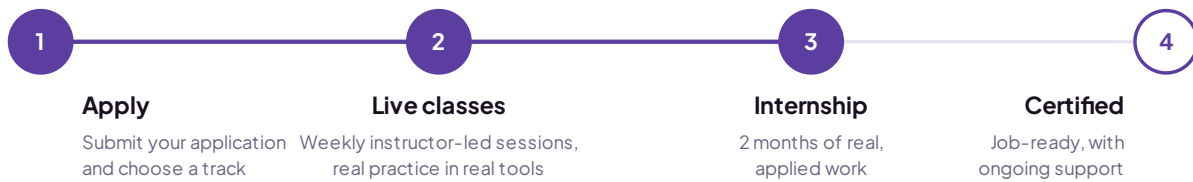

Mentorship

Close guidance from instructors and industry mentors throughout your course, not just during it.

Whichever track you choose, digital marketing, data analysis, cybersecurity, virtual assistance, or one of 30 others, the underlying structure is the same: live training, real internship, genuine support finding work.

Your learning **journey**

The same structure runs underneath every one of our 33+ courses, from application to a genuine shot at remote work, whichever track you're starting from, background in the field is never a requirement.

Built for how remote work actually runs now

Practical, current tools are worked into training itself, not treated as a separate, optional add-on.

AI-aware training

Courses across marketing, data, and content tracks build real, working comfort with the AI tools already used in those specific jobs, not abstract theory about AI in general.

Real tools, not theory

You practice inside the actual platforms employers use, spreadsheets, CRMs, design and analytics tools, so what you learn transfers directly into a first role.

Continuously updated

Course content is revisited as tools and best practices shift, so a certificate earned this year still reflects how the work is actually done.

This same structure is why our graduates show up to a first role already having done real, applied work, not just studied for one.
